

Wearflex® Launder Covers

Wearflex® laundry covers are low weight, high temperature resistant mattresses, which are specially designed to prevent heat loss during the transportation of molten metal. **Wearflex® laundry covers** have excellent insulation properties.

Wearflex® laundry covers consist out of a combination of different materials, which can vary up to customers' specification. The two basic materials of our **Wearflex® laundry covers** are an insulation blanket and a specially selected heat resistant cloth.

The cloth, which is being used on the hot-face, provides strength and tear resistance. Next to this, it will prevent fiber particles polluting in your melt. Contrary to the traditionally used fiber strips, **Wearflex® laundry covers** can be used multiple times, which also will result in less waste.

Due to the low weight design, **Wearflex® laundry covers** are easy to handle. They can easily be removed for launder maintenance access. All **Wearflex® laundry covers** are manufactured in our own production facility in Steenberg, according to customers' specifications (straight, elbows, bends, etc).
