

Wearflex® Insulation Covers

LEADER IN HIGH TEMPERATURE SOLUTIONS

Wearflex® insulation covers (WIC's) are tailor-made prefabricated insulation mattresses, which are being used to insulate complex shapes.

In our own production facility, **Wearflex® insulation covers** are being manufactured using one or several layers of high temperature resistant fabrics and/or an insulation blanket. They can be provided with various fixings in order to install them around the object which needs to be insulated. They have a durable construction, reduce on-site installation time and can be re-installed after inspection. Worldwide **Wearflex® insulation covers (WIC's)** are being applied for the outer insulation of pumps, actuators, nozzles, manhole flanges, pigtails, pipes, reactor vessels, etc.

Examples of industries in which our WIC's are being applied:

- Power Generation
- Petro(Chemical) Industry
- Maritime
- Automotive
- Geothermal Industry

Advantages Wearflex® insulation covers:

- Quick installation and removal
- Are designed to fit irregular shapes
- Reduce on-site installation time
- Will decrease heat loss
- Reduce energy costs
