Refrex® zone dividers are specially designed to separate your furnace into different zones. Because of the separation in zones, our **Refrex® zone dividers** will force the heat to pass the products more frequently.

Refrex® zone dividers are high temperature resistant (up to 1300°C) and are made out of Refrex® cloth, with on the inside a specially designed insulation blanket. They are supported with silicon carbide suspension profiles and ceramic fixing devices.

Refrex® zone dividers are designed to resist high temperatures at all sides. Due to the low thermal conductivity of the inside insulation and the high reflection value of the Refrex® material, **Refrex® zone dividers** do not accumulate heat and save energy.

Due to the light weight construction of the Refrex® zone dividers they can easily be suspend from the roof with small silicon carbide profiles (different shapes & dimensions) and fixed onto the profiles with different kind of fixing pins / washers made out of high alumina ceramic.

For more information about our other products, feel free to contact one of our specialists.

Advantages Refrex® zone dividers:

- Are light weight and flexible
- Create several temperature sections, without thermal shock of the material
- Do not accumulate heat and saves energy.
- Are easy to install and de-install without damaging the zone divider
